# Air purifying type smoke absorber for your work environments

In addition to FA-430, a quiet and powerful smoke absorber, FA-431, a new smoke absorber with long life filters and a remote control, is now in the lineup.

#### Part No. Part name Specifications A1572 ① Pre-filter (qty 10) For FA-430 1) Pre-filter L (qty 10) For FA-431 2 Main filter For FA-430 A5033 Main filter I For FA-431 B3619 3 Cap A cap is included in a unit as standard C5035 ④ Remote control For FA-431 Part No. Part name Specifications B3642 5 Duct For attaching duct to main unit. B3620 For absorbing smoke from the side. B3622 7 Rectangular nozzle For absorbing smoke from above. ® Round nozzle B3623 B3625 For preventing contaminants from being absorbed. (Mesh dimensions: Approx. 10 mm x 10 mm) (10) Sub-filter (qty 5) A5035 1) Sub-filter for rectangular nozzle (qty 20) A5037 (12) Sub-filter for round nozzle (atv 20) \*FA-430 does not perform as its specification with sub-filters. (3) Filter case for rectangular nozzle B5147 (4) Filter case for round nozzle B2418 15 Bench top hood For stopping smoke from escaping upwards without being affected by air conditioning. B2410 (6) Duct Required when using bench top hood. \*Φ75 x 2 m. Not freestanding. 17 Duct band (qty 2) Required when using bench top hood. ® Adapter (for 3-inch duct) Required when using bench top hood and ø75 duct.

\* The filter life will differ depending on the work environments and work conditions.

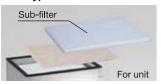

With the use of sub-filter, the life of pre-filter and main filter will be approx. Compared to FA-430 times\* longer!

The use of sub-filter can make the life of pre-filter and main filter 10 times longer\* than those of FA-430 by capturing large particles which can clog the filters very fast.

#### 3 Types of sub-filters

Even

more

#### ■ Remote control

With a remote control, now it is very easy to switch ON/OFF the unit which is placed under the table.

It is designed to prevent operation mistakes.

#### Common Features

#### Quiet operation

Exhaust noise has been reduced without sacrificing suction performance by the addition of a silencer unit to the exhaust outlet to ensure smooth air outflow.

#### 

\*Values measured when the unit was used with a 60 Hz power supply.

## Powerful suction and airflow adjustment

Employing a high-performance motor with 1,500 Pa of static pressure provides powerful suction and quiet operation.

3 airflow modes are available depending on the work environments.

-	Low	Not easily affected by the surrounding environments. For use in small, quiet locations. (For when low-noise operation is a priority.)
	Medium	For normal use.
	High	For use in locations that are significantly affected by the surrounding environments. (For when suction performance is a priority.)

Smoke flows in unexpected directions due to a variety of factors; not just because of the influence of air conditioning. High mode is recommended if your worksite is situated near a doorway, in a spot where people continuously pass by, near the exhaust outlet of a large machine, or in a similar location. It is possible to use low mode in laboratories and other places where these kinds of influences are limited.

#### ■ Freestanding ducts

Ducts can be bent or lengthened as desired and maintain their shape after adjustment, letting you place them exactly where suction is needed. Say goodbye forever to the hassle of long, heavy, and hard-to-handle ducts.

Bends and stretches freely for perfect placement!

#### Lightweight design

Lightweight and compact, HAKKO FA-430 weighs only 7.5 kg. Built-in handles allow the fume extractor to be moved easily, facilitating line changeovers.

\* FA-431 weighs 7.2 kg.

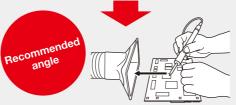

### Movement of smoke is affected by the surrounding environments

If the duct is mounted at an angle above the workpiece, it is affected by air conditioning

If the duct is mounted at directly above, it can be directly above.

Duct is mounted on the worktable to provide excellent suction performance

# Employing HEPA\* filter Excellent filtering efficiency 99.97% of particles greater than 0.3 µm Suitable for soldering in laboratory or office environments

FA-430 provides the excellent filtering efficiency, 99.97% of particles greater than 0.3  $\mu$ m, by HEPA filter.

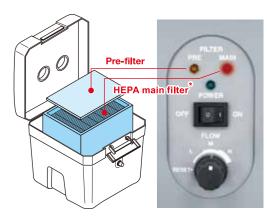

# Filtering efficiency of 99.97% or better Solder smoke Oily smoke Powdered milk Cigarette smoke Cement powder Viruses Bacteria Fumes (solid, JIS) Dust (solid, JIS) Dust (solid, JIS) Dust (solid, JIS) Particle diameter

# Filter replacement notification function ensures excellent filtering efficiency can be maintained at all times

No matter how sophisticated a fume extractor is, if the filter is not replaced at the right time, it will not be able to give maximum performance. HAKKO FA-430 detects the number of fan rotations and notifies the operator of the appropriate time to replace the filter, guaranteeing a comfortable working environment.

#### Pre-filter

When the pre-filter is 80% clogged or has been used for 200 hours, the orange indicator flashes on and off.

#### HEPA main filter\*

When the 10th pre-filter needs replacing, the orange and red lamps flash on and off.

\*The initial value of collection efficiency based on counting method for airborne dust collected by a single plate of filter (unfolded).
